This volume is dedicated to the memory
of Wilbur J. Cohen, whose concern
for the good health of all
inspired this project.

ACKNOWLEDGEMENTS

This compilation of Texas health care data was originally prepared as a research report in the Policy Research Project on Medical Care Indigency in Texas at the Lyndon B. Johnson School of Public Affairs, The University of Texas at Austin, 1986-1987, under the direction of the late Professor Wilbur J. Cohen.

In addition to Professor Cohen, a number of agencies and individuals were very helpful in providing information and suggestions that helped to shape the final product: the Texas Department of Community Affairs, the Texas Department of Health, the Texas Department of Human Services, the Texas Department of Mental Health and Mental Retardation, the Texas Foundation for Human Services, the Hogg Foundation, the Texas Medical Association, the Texas Hospital Association, the Health Administration Press, Helen Farabee, Bryan Sperry, L. Carl Volpe, Charles Begley, Douglas Mains, Jan Mutchler, Leslie Lanham, David Warner, Lonna Milburn, and Penny Joiner.

I am also very grateful to the Publications Department at the Lyndon B. Johnson School of Public Affairs, whose careful editing improved the original data book considerably. Any flaws that remain are entirely my responsibility.

Finally, special thanks to the Hermann Trust, which provided essential support for this project.

STATEMENT OF THE AIDS TASK FORCE ON THE POTENTIAL COST OF AIDS

COSTS OF CARE OF HIV-INFECTED PERSONS

As a rule, cost of care varies directly with the intensity of care provided. It may range from a few dollars' worth of donated time for counseling by a friend or health-care worker to thousands of dollars for care in a major hospital's intensive care unit. National estimates of health care costs for the average case of AIDS, from diagnosis to death (an average of about 15 months), have been as low as $40,000 and as high as $147,000. Texas' population of infected individuals is estimated to be between 50,000 and 100,000 persons. If AIDS develops within this pool at the same rate as in communities such as San Francisco, where such individuals have been followed over time, then 500 to 2000 new cases can be expected annually in the next few years. The cost of care has been estimated conservatively by the TDH staff at $37.5 million in 1987. It could well exceed $100 million in that or subsequent years.

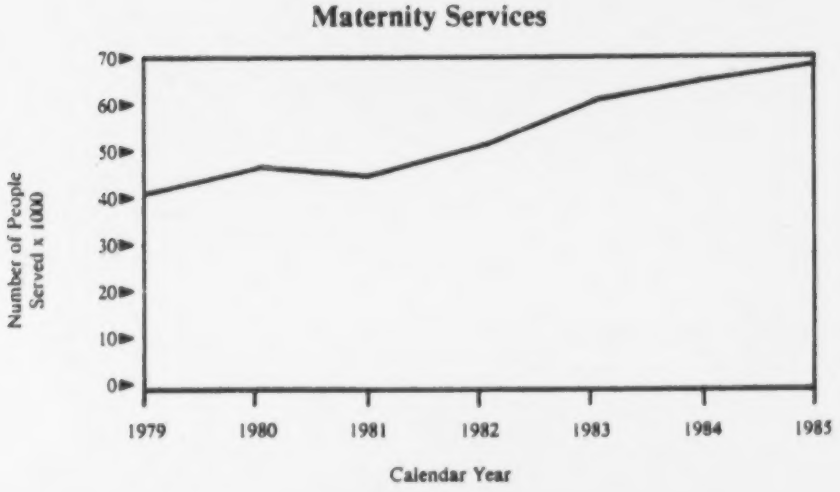
MATERNITY SERVICES: NUMBER SERVED AND LOCATION, 1985



*Jobs Bill monies served approximately 2,000 women with comprehensive maternity care, including intrapartum services. Of this number, 910 deliveries were arranged through our contracts with local health departments, 502 through contracts with community health centers, and 471 through the public health regions. Our analysis indicates that 179 physicians have participated in this program and that 49 hospitals, 5 medical schools, and 4 birthing centers have accepted patients through this Jobs Bill Program.

Maternal and Child Health on the U.S.-Mexico Border
$12.00 (Winter 1988 Special Project Report)
Presents data on socioeconomic, demographic, mortality, morbidity, and health care system characteristics of each of twelve principal counties and twelve major municipios among the U.S.-Mexico border. Using statistical information from the U.S. and Mexico censuses, various surveys, and reports by health agencies in the twenty-four counties and municipios studied, the report identifies patterns and trends in fertility, births, use of midwives, childhood diseases, and other areas related to the health of the border populations.
